

7/8 SCIENCE & SOCIAL STUDIES NEWS

September 14, 2020 Edition

ON THE SCIENCE FRONT

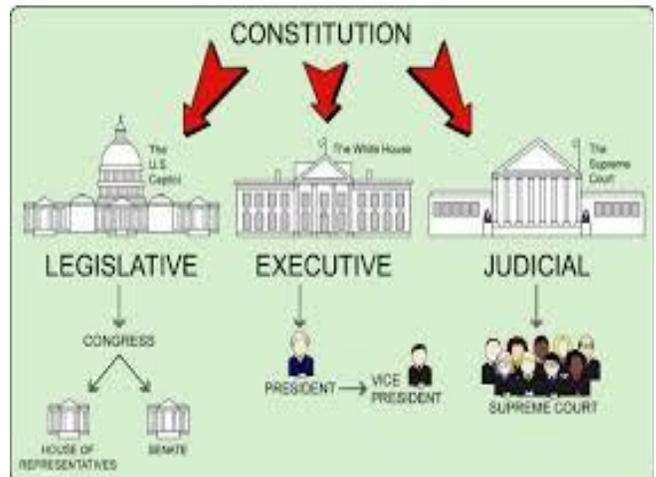

We just completed testing over the basics of the scientific process. Some students did fairly well on the test while others seemed to struggle. If your student did not do well on the test and would like to earn some extra points, he/she may research and write a paper about a significant contribution a Christian scientist has made to the Science community. They will need to tell a little about the scientist and his or her accomplishment. They will also need to describe the basic process the scientist went through to make their findings or create a new procedure, etc. since our chapter was all about the scientific method of investigation.

We will begin a new chapter this week about the characteristics of life as we are studying Life Science this year. It's amazing to study God's creation and see how He reveals his characteristics in what He has made. We will seek to be Creation Enjoyers, Earth Keepers, Order Discoverers and God Worshippers as we study Life Science this year.

HISTORY HEADLINES

Last week we wrapped up group work and made class presentations. We helped our classmate understand part of the events that took place after the Revolutionary War and leading up to the creation of the Constitution of the United States of America. We finished filling out our study guide packet and are getting ready for our chapter test on Wednesday. We will be playing a review game in class on Monday to help us prepare.

We will also be watching a short video on the electoral process as we just discussed how the writing of the Constitution determined the method by which our nation chooses our congressional representatives, senators, and the President and Vice-President. We are thinking we might like to hold a mock election at the beginning of November.
